Hi All,

I am making figures from the CAFS forecasts in support of the MOSAiC campaign and posting them on the ftp server: <ftp://ftp1.esrl.noaa.gov/RASM-ESRL/MOSAiC>

The CURRENT directory just has figures from the last forecast because there will be very limited bandwidth on the ice breakers. The ARCHIVE directory will have all of the forecasts. There are figures for the full MOSAiC domain and also zoomed in on the location of the Polarstern. The red dot is the location of the ship and the red line is the drift. There are figures for 1,2,5,10 day forecasts. There are also meteograms and time/height cross-sections for the 10-day forecasts. Before the location of the Polarstern is made available I am using 85N, 130E as the location of the ship.

Ola, Chris, Matt, Michael, Taneil you have agreed to be the contact person to download the images to the public server if requested. Please let me know if you have any questions/concerns about this.

Cheers,

Amy
