

T-Slotted Framing and Fittings

Configure full-size machine guards, enclosures, carts, workstations, and more with standard T-slotted framing and fittings. This framing has continuous T-slots for attaching fittings. **Single-profile rails** come in a variety of profile options, so you can choose the number (from one to four) and position of open T-slots for connecting fittings.

 For technical drawings and 3-D models, click on a part number.

Single Rails—Aluminum

Solid rails are stronger than hollow rails.

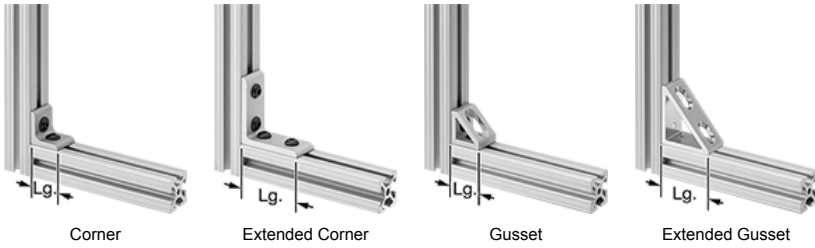

Hollow rails are lighter and more economical than solid rails.

Reducer Surface Brackets for Single Rails—Aluminum

Surface brackets connect rails without machining. Reducer surface brackets allow transitions between 1" and 1-1/2" height rails. The **offset-style reducer** has an offset to align the T-slots of the different-size rails.

Reducer Type	For Rail Ht.	Lg.	Mounting Fasteners Included	Silver	
				Part No.	Each
Straight	1", 1 1/2"	2 1/2"	Yes	47065T298	\$6.39
Offset	1", 1 1/2"	2 1/2"	Yes	47065T228	7.25

Braces for Single Rails—Aluminum

Braces create sturdier connections than brackets. They connect rails without machining. **Diagonal** braces add more support than corner braces.

End-Feed Fasteners

Single

Compact Head

Dual

Triple

Spring Tab

End-feed fasteners slide into the end of the rail to attach components. They consist of a screw and nut. Tighten the screw with a hex key. **Compact-head** fasteners are for use in tight spaces. **Dual** fasteners have two fastening points. **Triple** fasteners have three fastening points and can be used to attach large brackets. **Spring tab** fasteners align the nut flush with the T-slot opening.

Drop-In Fasteners

with Handle

Spring-Loaded Ball

Spring Tab

with Stud

Drop-in fasteners can be placed directly into the T-slot to attach components—no need to disassemble your structure. They consist of a screw and nut. Fasteners **with a handle** are easy to grip and drop in place. Tighten with a hex key. **Spring-loaded ball** fasteners hold the nut in place. Tighten with a hex key. **Spring tab** fasteners align the nut flush with the T-slot opening. Tighten with a hex key. Fasteners **with stud** twist into place. Tighten with a socket wrench.

Connectors

Straight (Slide into T-slot—no machining required.)

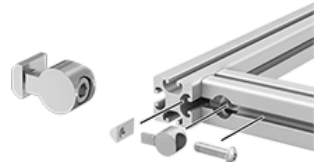

L-Shaped (Slide into T-slot—no machining required.)

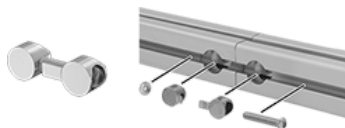

Tee (Thread the connector directly into a T-slot and use the included fastener to secure.)

Concealed (Tap one hole to install the connector and drill one access hole in the mating rail to secure the connection.)

Anchor (Drill an installation hole in the face of one rail to install.)

Double Anchor (Drill an installation hole in the face of each rail to install.)

Connectors mount internally rather than externally to provide a more finished appearance than brackets and braces.

Straight, L-shaped, and Tee connectors install without machining. **Straight** and **L-shaped** connectors slide into T-slots. **Tee** connectors thread directly into a T-slot and use the included fastener to secure.

Concealed connectors require one tapped hole to install the connector and one drilled access hole in the mating rail to secure the connection.

Anchor connectors allow positioning anywhere along the mating rail's T-slot. Drill an installation hole in the face of one rail to install.

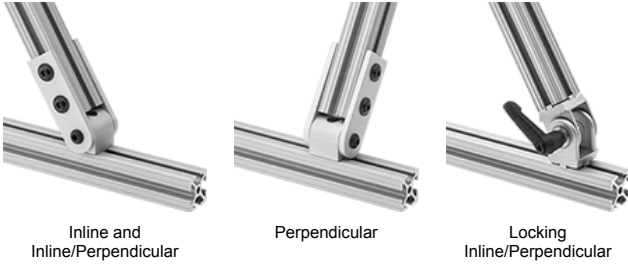

Double-anchor connectors join rails end-to-end. Drill an installation hole in the face of each rail to install.

Hinges for Single Rails

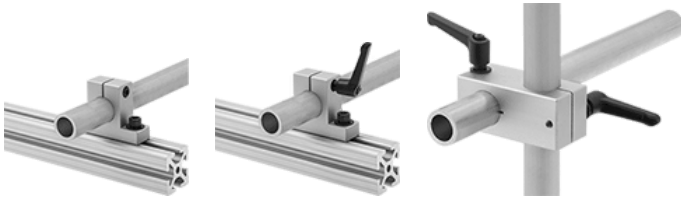

Rail-to-rail hinges provide smooth motion at the junction between two rails. Hinges with a **nonremovable pin** are reversible and can be used on left- and right-side doors. Hinges with a **lift-off pin** have a permanently attached pin for quickly lifting the door off the hinge without removing the pin. To choose a door mounting location, stand on the pull side of the door. Use a right-side hinge if the hinge is on the right. Use a left-side hinge if the hinge is on the left.

Rail-to-panel hinges provide smooth motion at the junction between a rail and a panel. They are reversible and can be used on left- and right-side doors.

Mounting Plates

Rectangular Square Concealed

Rectangular and **square mounting plates** have room to drill mounting holes for attaching parts to T-slotted framing that are not sized to fit.

Concealed mounting plates slide inside the T-slot and have two mounting holes for attaching parts to T-slotted framing. When securing parts to the plate, the plate secures to the rail.

Hydraulic Lift Kits for Single Rails

Hydraulic lift kits transform fixed-height T-slot workbenches into adjustable-height work surfaces. To install, attach each cylinder to a T-slot workbench leg with fasteners. Then, mount the pump under the workbench top and connect the cylinders to the pump with the included tubing. Use the hand crank to adjust the workbench height.

For Rail Ht.	For Min. Leg Ht.	Ht. Added	Material	Includes	Each
1 1/2"	19 1/4"	1 5/8"-13 5/8"	Aluminum	4 Lift Cylinders, 8 T-Slot Mounting Brackets, Hydraulic Pump with Hand Crank, Hydraulic Tubing, Mounting Fasteners	47065T352 \$774.56

Covers

Wear Strip

Dust

Antislip

Wear strip covers are abrasion-resistant inserts that are slippery to reduce friction and increase sliding action along a T-slot.

Dust covers conceal wires and keep dust out of the T-slot. Cut covers to size with scissors and press them into a T-slot. Flip the black dust covers over and they have a groove for holding a panel inside the T-slot.

Antislip cover adds traction to the surface of a rail. Insert it into the T-slot.

Panel Slides

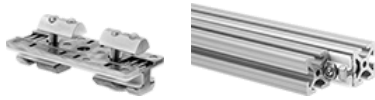

Panel slide tracks include a top and bottom track that snap into T-slots and don't require fasteners. They allow panels to slide smoothly along the track after the frame is assembled.

Panel slide glides attach to the end of a rail to allow panels to travel smoothly along a T-slot. They also rotate 360° to allow the panel to pivot. The panel (sold separately) fits in the T-slot of the sliding rail.

Door Stops

Magnetic

Rubber Bumper

Door stops require a gap so doors will close properly. The gap is the distance between the door and the frame when the door is closed. **Magnetic** door stops hold a door closed with magnets. **Rubber-bumper** door stops prevent a closing door from banging into its frame.

For Rail Ht.

Magnetic tool holder mounts inside the rail to hold small ferrous objects.

Magnetic-arm tool holders mount to the rail and have raised bumps to keep small ferrous objects in place.

Hook-and-loop tool holders come with two pieces to hold lightweight objects. One piece is hook and mounts to the rail. The other piece is adhesive-back loop and mounts to the object. Secure the two pieces together to store the object on the rail.

Flanged Sleeve Bearing Carriages for Single Rails

Sleeve bearing carriages are for linear motion applications. They have through holes to allow fastening from the top of your load into the carriage as well as from the bottom of the carriage into your load. They can handle dirt, water, impact, and vibration. **High-strength** sleeve bearing carriages are good for pick-and-place, parts-transfer, and other high-speed applications with frequent starts and stops. **Bearing pads** replace worn pads in sleeve bearing and high-strength sleeve bearing carriages. **Hand brakes** hold sleeve bearing carriages in place on the rail. Drill a hole in high-strength carriages to mount. Standard carriages have a mounting hole for the brakes.

Track Roller Carriages for Single Rails

Track roller carriages are for applications that don't require high precision, such as creating sliding door frames, glides, and track systems. Multiple track roller carriages can be used on a rail.
