

Figure 1. The Scripps Oceanographic Institution Research Vessel Roger Revelle at 20 S Latitude 85 W Longitude supporting NOAA's Ocean Observations and Climate Variability programs. ETL's seagoing flux system is on the mast on the buoy; the cloud radar and microwave radiometer container is forward on the second white level. The replacement WHOI climate buoy is the round white object sitting low on the stern.

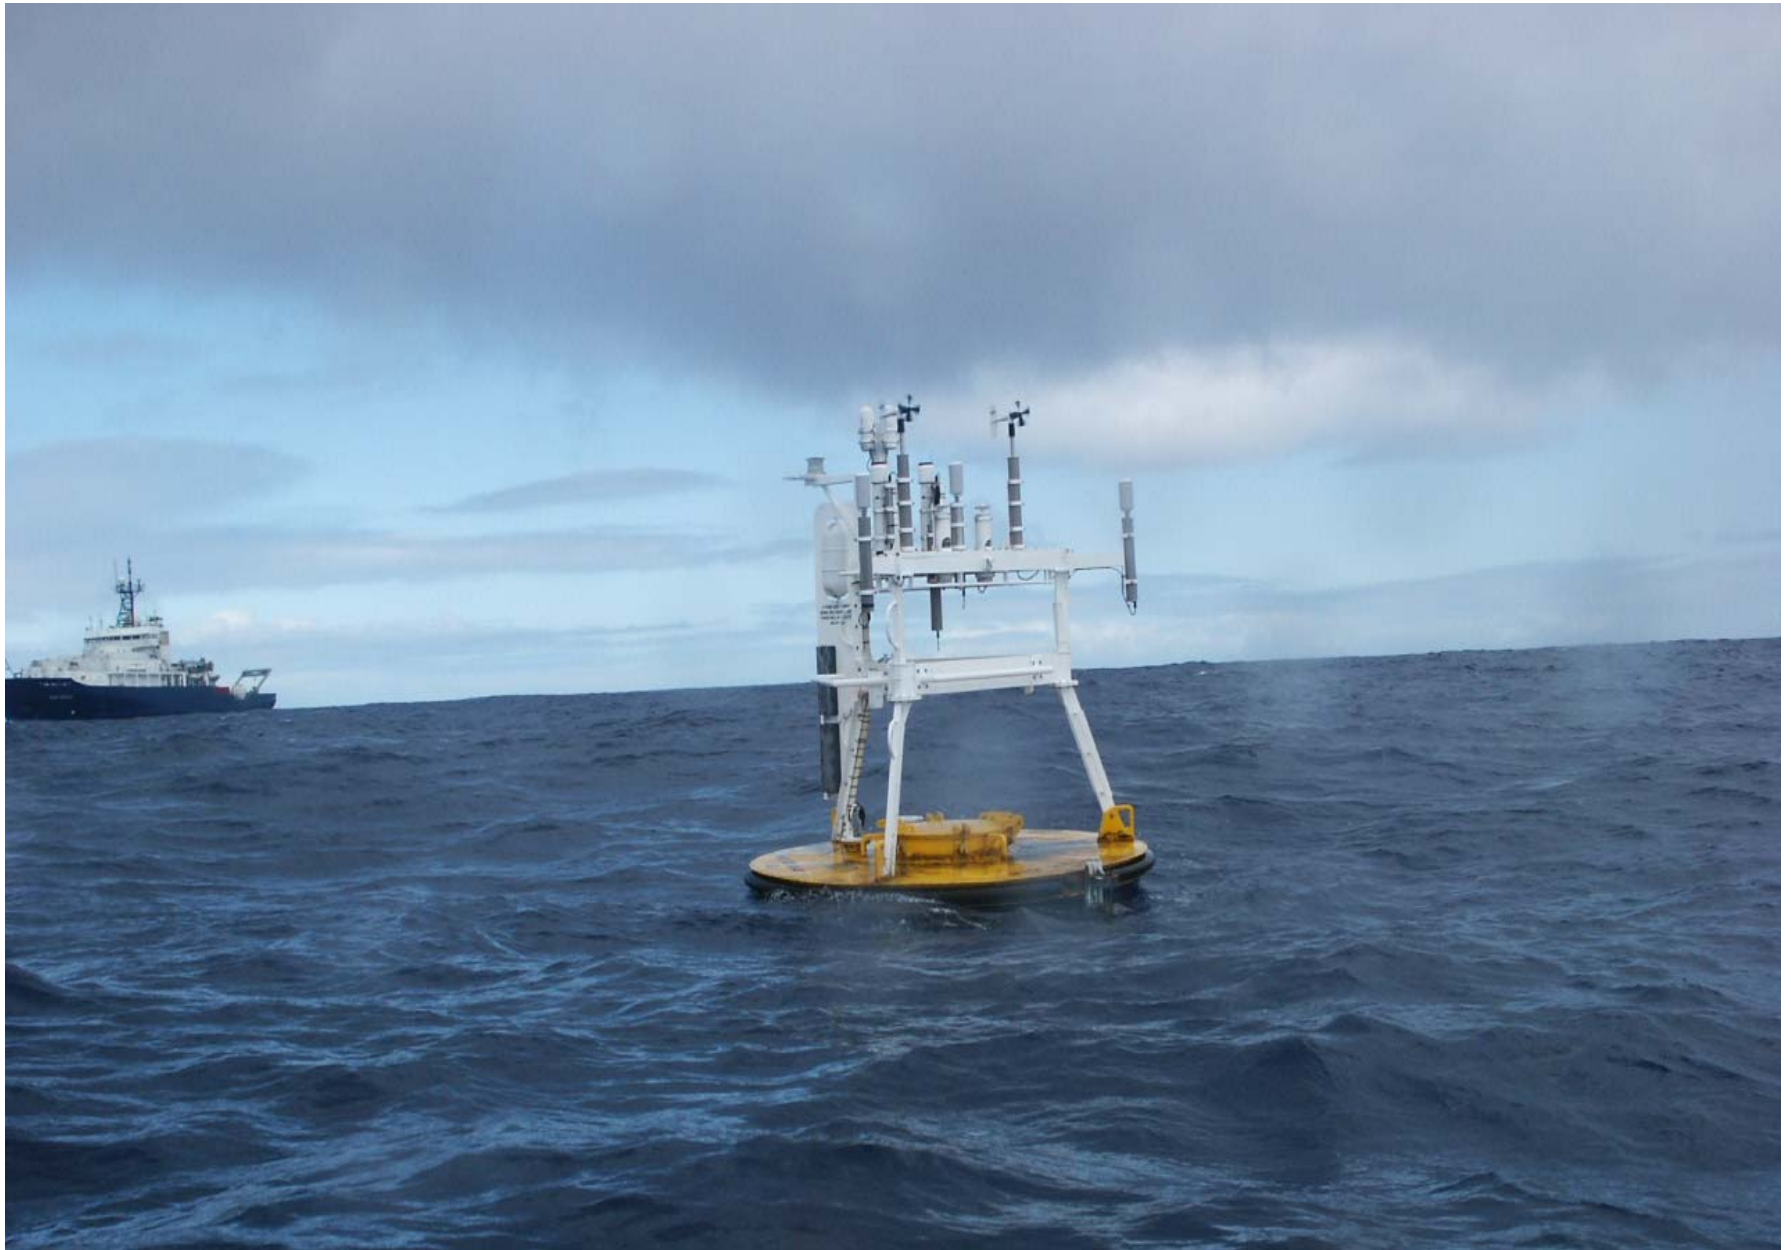

Figure 2. The old WHOI buoy awaiting replacement after a year on the job.
